

**SAVE TIME  
SAVE MONEY  
REHEARSE BEFORE  
YOU DO IT!**

## RoC Drill

Rehearsal of Concept

A RoC drill is a risk **mitigation** tool used by Special Operation Forces to rehearse the plan of a **complex** operation. At KiNOD Consult we utilize the concept to **rehearse** the execution of commercial projects to **reduce risks, increase safety and save money**.

### Which projects?

Your project is suitable for RoC drilling if it is a physical activity, such as a construction project. Involves several actors, and has overlapping activities and interfaces. It may require coordination between actors and may involve health and safety aspects.

### What do we do?

We design, plan and execute RoC drills with minimum impact on your organization. We study the project, with its phases, method statements and construction process. We interview your project members and plan the RoC drill as well as design and produce models that are used to simulate and rehearse the execution of the project.

### What will you get?

- A list of actions to improve your project.
- ID of risks and risk mitigation.
- Improved common understanding of the project.
- Improved understanding of interfaces and SimOps.
- ID of shortfalls in the plan.

## Who We Are:

RoC drilling is a military planning tool used to rehearse and test complex projects. Here at KiNOD Consult we employ active duty officers trained and specialized in conducting RoC drills in commercial projects.
